

Abstract

This invention offers a kind of exhausting apparatus with an air dividing case for water closet, comprises water closet, exhaust fan and conducts, wherein the exhausting apparatus having an inner chamber with outlet and inlet. The outlet is connected to an inlet of the exhaust fan through conduct, while the inlet is connected to the water closet through conduct. An adjustable air valve is provided between the inlet and the inner chamber, and the outlet of the exhaust fan is connected to outdoor through conduct. This invention can exhaust air with unpleasant odor inside water closets directly to outdoor to prevent harmful gas from inhaled by persons, but also make one set Apparatus possible to be used for multiple water closets and/or toilets. It may keep air in toilets brisk and venting.
